**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 27-50, drawn to methods of detecting mismatches, classified in class 435, subclass 6.
  - II. Claim 51, drawn to a kit containing nucleic acid, classified in class 536, subclass 23.1.
  - III. Claim 52, drawn to a bacterial host cell, classified in Class 435, subclass 240.2

The inventions are distinct, each from the other because of the following reasons:

2. Inventions in Groups II and III and in Group I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the products of Group II can be used in the method of Group I or in nucleic acid purification methods or in nucleic acid amplification methods. Also, the product of Group III can be used in the method of Group I, in protein expression methods, in methods of cloning nucleic acids, or in methods of transfection.
3. Inventions in Group II and in Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04,

Art Unit: 1634

MPEP § 808.01). In the instant case the different inventions are unrelated because they differ in structure and function and in operation and effect. The nucleic acids in Claim 51 are linear polymers of nucleotides which function by hybridization or by binding proteins and operate to express a marker. The bacterial cell is a living organism which comprises mismatch repair enzymes. These two products are entirely different.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Also, because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Pamela Sherwood on May 12, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
